BOOK SYNOPSIS

The iron mining industry was quite extensive throughout the area known as the Lake Superior Iron Ore District, which included Michigan, Wisconsin, Minnesota and Ontario and other prominent iron mining regions to the northeast and east of Lake Superior in Ontario as well Quebec and Labrador. All of the iron ore was transported by rail to a wide number of lake ports on Lake Superior, Lake Michigan and Lake Huron. This book lists all of the ore docks constructed on the Great Lakes, as well as their operational life span right up to the present time. Each chapter for each railroad includes the types of ore docks once or currently operated as well as a roster of ore cars from the 1940s to the present time, and includes photos of the ore docks and ore cars, ore car schematics and pertinent data. It also provides some new perspectives for historical and future research, and can be used for the art work of model railroading.
